HR Dashboard Insights Report

Brief Description:

This dashboard was created using the HR Data Analytics dataset to provide actionable insights for Human Resources professionals. It focuses on workforce attrition, performance, compensation, and other employee metrics to aid HR decision-making and strategic planning.

Key Insights

1. Patient Trends / Employee Demographics

- **Age Group Distribution:** Majority of employees fall within the Mid-level [30–40] age group. Younger employees (<30) have the highest attrition rate
- **Gender Representation:** Gender split is approximately 60% Male to 40% Female
- **Department Headcount:** Research & Development holds the largest portion of staff

2. Attrition & Retention

- **Overall Attrition Rate:** Calculated as 16% of total employees. Higher attrition among single (marital status) employees at the company
- **Attrition by Distance:** Employees living farther than 15km from work show highest attrition, followed by employees living within 5 to 15km from work
- **Attrition by Job Role or Department:** Employees in the sales department and those holding the role of sales representatives have the highest attrition

3. Performance vs Salary Analysis

- **Performance Ratings vs Monthly Income:** No strong correlation between higher performance and salary.
- **Salary Band Distribution:** Most employees earn within the medium income band i.e. within #3000 to \$7000
- **Education vs Salary:** Employees with Education level 4–5 generally earn higher.

4. Department Performance / HR Efficiency

- **Promotion Gaps:** Over 40% of employees have not been promoted in the last 5 years.
- **Tenure Trends:**
 - Long-serving employees (10+ years) are mostly found in R&D.
 - Younger departments like HR and Sales have higher turnover.
- **Work-Life Balance vs Attrition:**
 - Employees with lower work-life balance scores tend to leave more.

Design Choices

- **Visual Hierarchy:** KPIs like Attrition Rate, Avg Monthly Income, and Headcount shown at the top. Breakdown visuals (bar, pie, line charts) below
- **Filters:** Interactive filters by Age Group, Gender, monthly income band, distance bucket, education level, marital status.
- **Bookmark Button:** Used to reset dashboard and improve user experience.

Challenges and Solutions

- **Challenge:** Dataset was malformed with all data in a single column.
- **Solution:** Used Power Query to split the column by delimiter and restructure the dataset.
- **Challenge:** No clear meaning for education levels.
- **Solution:** Mapped education values 1–5 to: 1 = Below College, 2 = College, 3 = Bachelor, 4 = Master, 5 = Doctorate.
- **Challenge:** Ambiguity in MonthlyRate vs MonthlyIncome.
- **Solution:** Used MonthlyIncome for salary-related insights, excluded MonthlyRate due to unclear purpose.

5. Assumptions Made

- Education levels were mapped based on common industry interpretation.
- MonthlyRate column was not used due to unclear definition.
- Attrition Flag was interpreted as 1 for ‘Yes’ and 0 for ‘No’.
